APS Elastomers Increases TPE Production

Romulus, MI (**June 10, 2014**) APS Elastomers has increased its thermoplastic elastomer (TPE) production by 10%. Growing demand from OEMs, processors and manufactures of wire and cable, and tubing and hoses used in industrial, transportation, and electronic applications are the impetus for the increase. "Increasing production capacity, developing new technologies and product offerings to customers allow us to prove our commitment to the TPE market in North America", says Stephane Morin, owner of APS Elastomers.

APS Elastomers' TPEs can be manufactured to precise specifications; producing materials that best suits customers' performance requirements. "Our chemical and manufacturing expertise allow us to compound standard, as well as custom grades for individual and unique applications", says Morin.

APS Elastomers is committed to providing in-depth and high level customer and technical service, problem-solving, product development and support to designers, OEMs and processors; building relationships based on knowledge, trust and experience. APS Elastomers also provides beside-the-press consulting, full laboratory services, and expedited shipments.

For more information on TPUs TPEs, TPVs, as well as standard and custom grades, contact: APS Elastomers at info@apstpe.com
