APS Elastomers' Viprene® TPVs Lighten the Load

Romulus, MI (November 18, 2014) Government requirements for reduced vehicle weight for fuel economy has in turn created the need for lightweight towable recreational vehicles. Viprene® TPVs are a cost-effective, lightweight alternative for use in a variety of components used in campers, snowmobiles, boats, and other recreational vehicles that require reduced weight for towing.

Available in natural or black pellets with a Shore hardness range of 35A-50D, Viprene® TPVs provide flexibility over a wide temperature range and resistance to degradation from water, oil, and grease. Additionally, Viprene® TPVs offer a better compression set, are fatigue resistant, dimensionally stable and offer heat aging stability, low temperature flexibility and excellent U.V. and ozone stability. “Our Viprene® TPV can be formulated to individual specifications needed in a variety of applications that require reduced weight”, says Stephane Morin, owner of APS Elastomers.

For more information on Viprene® grades for extrusion and injection molding, as well as other grades for conventional, unique or highly durable applications, contacts APS Elastomers, info@apstpe.com

APS Elastomers is committed to providing in-depth and high level customer and technical service, problem-solving, product development and support to designers, OEMs and processors; building relationships based on knowledge, trust and experience. APS Elastomers also provides beside-the-press consulting, full laboratory services, and expedited shipments.
